Platform Vision

■ Brave is designed as a career intelligence ecosystem built around the approved assessment, scoring engine, archetypes, recommendation engine and counselor framework.

Primary objective: transform assessment results into actionable career clarity, parental guidance and counselor interventions.

User Roles

Student: completes assessment, receives dashboard, action plans and career recommendations.

Parent: views translated insights and support recommendations.

Counselor: reviews intelligence, flags, archetypes and interventions.

School Administrator: manages cohorts and reporting.

EB Brave Administrator: platform governance and configuration.

Complete User Journeys

Student Flow: Landing → Registration → Assessment → AI Analysis → Dashboard → Action Plan.

Parent Flow: Invite → Parent Dashboard → Guidance → Progress Monitoring.

Counselor Flow: Queue → Review → Session Planning → Notes → Followup.

Admin Flow: School Setup → Monitoring → Analytics → Reporting.

Student Dashboard

Parent Dashboard

Counselor Dashboard

Admin Dashboard

Navigation Architecture

Role-based navigation, contextual menus, dashboard shortcuts, assessment status indicators and permission-controlled access.

Student Dashboard Design

Overview card, archetype card, career match rankings, strengths, growth areas, future skills index, action plan and milestone tracker.

Parent Dashboard Design

Parent summary, strengths translation, communication guidance, support recommendations and development opportunities.

Counselor Dashboard Design

Student overview, red/yellow flags, archetype analysis, counseling priorities, session planner and notes repository.

Admin Dashboard Design

User management, counselor management, school management, assessment analytics, reporting and audit controls.

Assessment Experience Design

Six-lab assessment experience preserving the approved framework. Mobile-first design, progress indicators, section transitions and autosave support.

Data Requirements

Student profiles, assessments, responses, trait scores, archetypes, career matches, reports, counselor notes and audit logs.

MVP Definition

Version 1: Assessment, scoring, reports, dashboards.

Version 2: Counselor collaboration, school analytics, benchmarks.

Version 3: AI mentoring, longitudinal tracking, learning pathways.

AntiGravity Implementation Notes

Separate modules for authentication, assessment engine, scoring engine, AI layer, reporting engine and dashboards.

API-first architecture with reusable components and workflow automation.
